

ISOFOAMER INFINITY

CONTINUOUS FOAM GENERATOR

Isofoamer Infinity is a continuous foam generator specially designed for the production of lightweight foam concrete for densities varying from 300 up to 1200 Kilograms per cubic meter.

Isofoamer Infinity is very simple to operate, when the plastic tanks are full of Isolite-RTUC foaming agent and water, it produces continuous foam once it's ON. This foam is added, through a hose, to the mixer where slurry composed of water/cement or water/cement/sand is ready, then pumped to the pouring place up to 150 m vertical.
